                                                                                   terms

        Web-based applications are typically required to be highly customizable and configurable.
        New application requirements have to be introduced rapidly, often without stopping the
        running application process. Moreover, in many cases the same business logic has to be
        presented to different channels and/or user interfaces. In this paper we present a
        dynamic page template architecture for decomposing configurable and representational
        fragments of the application from the business logic. Page templates ...

        Keywords: dynamic software architecture, object-Oriented Scripting, web engineering

22 Industrial and practical experience track paper session 2: Crawling a country: better   ◼
        strategies than breadth-first for web page ordering
        Ricardo Baeza-Yates, Carlos Castillo, Mauricio Marin, Andrea Rodriguez
        May 2005 **Special interest tracks and posters of the 14th international conference on
                 World Wide Web**
        Publisher: ACM Press
        Full text available: 🗎 pdf(275.52 KB)   Additional Information: full citation, abstract, references, index terms

        This article compares several page ordering strategies for Web crawling under several
        metrics. The objective of these strategies is to download the most "important" pages
        "early" during the crawl. As the coverage of modern search engines is small compared to
        the size of the Web, and it is impossible to index all of the Web for both theoretical and
        practical reasons, it is relevant to index at least the most important pages.We use data
        from actual Web pages to build Web graphs and execute a crawl ...

        Keywords: scheduling policy, web crawler, web page importance
